Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Comment: This enzyme is a virulence factor secreted into the periplastic space of gram C,Generics:
A,Gene: sodC
A,Map position: 37 min
C,Function:
C,Superfamily: superoxide dismutation of 2 molecules of peroxide radical to dioxygen
C,Superfamily: superoxide dismutase [Cu-Zn]
C,Keywords: copper; metalloprotein; oxidoreductase; zinc
F,1-19/Pomain: signal sequence #status predicted <\Sig>F;20-173/Product: superoxide dismutase (Cu-Zn) #status predicted
F;74-169/Disulfide bonds: #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ajdene: sodc:
C;Function:
A;Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C;Superfamily: Superoxide dismutase [Cu-Zn]
C;Keywords: copper; metalloprotein; oxidoreductase; zinc
F;164/Active site: Arg #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nature 392, 353-358, 1998

CyComment: This protein is an extracellular form.
C;Function:
C;Function:
C;Function:
C;Superfamily: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C;Superfamily: superoxide dismutase [Cu-Zn]
C;Keywords: copper; J1ycoprotein; metalloprotein; oxidoreductase; zinc
F;56/Binding site: carbohydrate (Asn) (covalent) #status predicted
F;70,72,71,74/Binding site: copper (His) #status predicted
F;81-170/Disulfide bonds: #status predicted
F;87,70,75,104,07/Binding site: zinc (His, His, His, Asp) #status predicted
F;167/Active site: Arg #status predicted

C, Comment: This protein is a membrane-bound form.
C, Function:
A, Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen of 2 knotion:
A, Description: catalyzes the dismutase [Cu-Zn]
C, Keywords: copper; glycoprotein; metalloprotein, oxidoreductase; zinc
C, Keywords: copper; glycoprotein; metalloprotein description
E, S64 Binding site: carbohydrate (Asn) #status predicted
E, 70, 72, 87, 144/Binding site: copper (His) #status predicted
E, 70, 72, 87, 144/Binding site: zinc (His) #status predicted
E, 87, 104/Binding site: zinc (His, His, Asp) #status predicted
E, 107/Active site: Arg #status predicted

C;Function:
A;Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
A;Description: catalyzes the dismutase [CL-Zn]
C;Superfamily: Superoxide dismutase [CL-Zn]
C;Keywords: copper; metalloprotein; oxidoreductase; zinc
F;46,48,63,119/Binding site: copper (His) #status predicted
F;57-145/Disulfide bonds: #status predicted
F;63,71,80,83/Binding site: zinc (His, His, His, Asp) #status predicted
F;142/Active site: Arg #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 R,Scioli, J.R.; Zilinskas, B.A.

A;Title: Cloning and characterization of a cDNA encoding the chloroplastic copper/zinc-s
A;Reference number: A30204; MUID:89017257; PMID:2845417
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen of 5. Superfamily: Superoxide dismutase [Cu-Zn]
C. Superfamily: Superoxide dismutase [Cu-Zn]
C. Superfamily: Copper; metalloprotein; oxidoreductase, zinc
F. 1-48/Domain: transit peptide (chloroplast) #status predicted <TNP>
F. 19-202/Product: superoxide dismutase (Cu-Zn) #status predicted <AMI>
F. 194.96.111.166/Binding site: copper (His) #status predicted
F. 105-194/Disulfide bonds: #status predicted
F. 111,119,128,131/Binding site: zinc (His, His, Asp) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    94 LQAHGHYDPDKTGKHEGPLG-NGHKGDLPRLVVKADGIA-----KETLLAPRLTVKEIK 146

C; Function:
A; Rescription: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C; Superfamily: superoxide dismutase [Cu-Zn]
C; Keywords: chloroplast; copper: metalloprotein; oxidoreductase; zinc
C; Ria, 33, 55, 107/Binding site: copper (His) #status predicted
F; 33, 75, 50, 107/Binding site: zinc (His, His, His, His, Rsp) #status predicted

Isolated or recombinant polypeptide for treating porcine and avian species against Lawsonia intracellularis infection, comprises, mimics or cross-reacts with the B or T cell epitope of Lawsonia SodC polypeptide.

Claim 6; Page 79-80; 85pp; English.

This sequence represents an immunogenic polypeptide, SodC, which is capable of eliciting the production of antibodies against L. intracellularis when administered to an avian or porcine animal. This polypeptide can be used in a vaccine composition for the prophylaxis or treatment of intestinal infection of an animal by Lawsonia. The DNA

```
encoding SodC polypeptide may be used in a vaccine vector such that the SodC polypeptide is expressible at a level sufficient to confer immunity against Lawsonia. The polypeptide is useful for diagnosing infection of a porcine or axian animal or identifying whether or not the animal has suffered from a past infection or is currently infected with L. intracellularis or a microorganism that is immunologically cross-reactive to it. This is done by contacting whole serum, blood lymph nodes, ileum, caecum, small intestine, large intestine, faeces or rectal swab derived from the animal with the immunogenic polypeptide or an antibody raised against it. Probes derived from the Lawsonia DNA are useful for detecting L. intracellularis or related microorganisms by hybridization. The SodC polypeptide is useful in the preparation of a medicament for the treatment and prophylaxis of porcine proliferative enteropathy (PPE)
                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                   120

New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for

2003-576092/54.

N-PSDB; ADA30637

The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial

Example; SEQ ID NO 6050; 328pp; English.

                                                                                                                                                                                                                                                                                             105 TRGFHIHENPSCAPAVKDGKPGAALAAGSHYNPNQ-APHHGTPTTGHLGDLPALVVDNTG 163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Enterohemorragic Escherichia coli 0157:H7-specific nucleic acid molecul and a polypeptide and its use, a polypeptide, a vector and a host cell.

The sequence is that of the 20kD Brucella abortus copper-zinc superoxide dismutase (CuZnSOD) which is used as part of a method for detecting B. abortus infection in animals, in particular Bovine brucellosis. The method can distinguish between animals which have a natural infection and those which have been vaccinated. CuZnSOD or a segment effective as an antigenic determinant is combined with a body fluid sample and the presence of a complex of the CuZnSOD and antibody detected. (Updated on 25-MAR-2003 to correct pA field.) (Updated on 25-WAR-2003 to correct pI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterchaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GHLTAGLQAHGHYDPDKTGKHEGPLGNGHKGDLPRLVVKADGIAKETLLAPRL-TVKEIK 146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polypeptides, amethod for producing the polypeptides, a method of per producing the polypeptides, a method for evaluating a compound for the ability to bind a P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), and the encoded proteins (ABB57737-ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB77072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5 LVVSLALCATICSAAQTRNMPIQAIAYLIGPVQSDNTQVK---GNVTFTQNDCGQNVHVR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebbla), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           160

The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            96 KVRITGLAPGLHGFHIHEFGD-----TTNGCMSTGPHFNPN--GLTHGAPGDEVRH 144

The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TGKHEGPLGN-GHKGDLPRLVVKADGIAKETLLAPRLTVK---EIKGRTVMIHAGGDNYS 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10;
                                                                                                                                                                                                                                                                                                                                  The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebbla), cancer and immune system disorders. The present sequence was used to illustrate the invention

The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system discorders. The present sequence was used to illustrate the invention

                                                                                                                                                                                                 9
                            The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct. The invention also discloses a method for identifying selenoprotein coding sequences, for detecting certain viruses (e.g. HIV or Ebola), cancer and immune system disorders. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                            196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to selenoproteins encoded in the genome of a virus, where the coding sequence of the selenoprotein is genetically engineered for expression in a nucleic acid construct.                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants oversexpresshing the heterodimeric EZPA/DPA transcription factor of Azabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, c mizymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, cach relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell cole in the biosynthesis, nitrogen and/or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale cress protein

The fusion protein comprising the a glycosaminoglycan binding region and human superoxide dismutase, joined via a linker region was constucted according to the formula M-(Z-M)-SOD where Z is the peptide -EXTLRKWLK-. The fusion protein is useful for extending the in vavo lifetimes of biologically active cpds. such as SOD and for targetting them to specific ell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of this such anaged on protein and is used in the treatment of analysis and sease of purification of son is used in the treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              6
                                                                                                                                                                                                                                                                                                                             of Protein C inhibitor (PCI), namely the A+ amplipathic alpha hells of Fur, and human superoxide dismutase, joined via a linker region. The fusion protein is useful for extending the in vivo lifetimes of biologically active epds. such as SOD and for targetting them to specific cell surfaces or substrates. The glycosaminoglycan (GAG) binding protein is formed into a fusion protein with SOD to increase stability, plasma half-life and ease of purification of SOD. SOD is useful for reduction of tissue damage caused by oxygen radicals and is used in the treatment of AAR24226-35, AAR27932-51. (Updated on 25-WAR-2003 to correct PN field.)
